PROFILE

Product designer with over three years at denkwerk, a design agency in Cologne. I worked on design systems, accessibility and AI projects for enterprise and public media clients. I like to stay close to the build: I write the specs developers work from, follow the implementation through QA, and use AI to build in code, as with my portfolio. I studied linguistics, cultural studies and architecture, and they still shape how I structure and name things. I work in English, German and Spanish, and I'm looking for an in-house product team.

WORK EXPERIENCE

Experience Designer | denkwerk GmbH · Cologne, Germany

11/2022 – 02/2026

Started as an intern and grew into a mid-level role, with a promotion to senior planned for 2026. UX and UI design for enterprise and public media clients across mobile, TV, web and internal tools, with growing ownership of design systems, accessibility and AI projects.

Key projects

- **ARD / SWR Mediathek, AI proof of concept** · Tested whether AI can generate subjective editorial metadata, mood and viewing motivation, for ARD's streaming platform. Independently set up and ran the Google AI Studio (Gemini) toolchain, co-defined three consistency metrics, and built a Python tool with AI assistance to evaluate 80 test runs. Led the project through the evaluation phase; the results (68–92% cluster consistency across runs) moved it to MVP planning.
- **Solid Design System, Union Investment** · Sole UX designer on a token-based design system nominated for the UX Design Awards 2024. Defined how every component is documented, based on surveys with designers and developers and an audit of legacy components across the bank's products. Researched and defined UX patterns for forms, search, navigation, onboarding and data visualisation. Structured and designed the public landing page, built from the system's own components.
- **Pet tracker app, Deutsche Telekom** · GPS tracking app for dogs on iOS and Android. Designed the onboarding, dog profile, route history, a mandatory password change flow and the dog's status card, and adapted the virtual fence to the real accuracy of the GPS hardware. Wrote the developer handover, rebuilt the QA process with the external development team, and led UX after the lead designer left. Unreleased.
- **Accessibility task force, internal** · Co-led a four-person group that brought accessibility into the agency's daily work: an internal toolbox, an open round for questions from the whole company, testing sessions, and audits of client products against WCAG and the BFGS. Advised developers during implementation on a hotel client's website.
- **White Label Design System** · Core contributor in the early phase; led strategy and planning for the system's architecture.
- **MagentaTV and telekom.de, Deutsche Telekom** · Supporting designer: personalisation, gamification and micro-interactions for the TV app; benchmarking, task flows and the login experience for the website.

Print Issue Designer | Matices Magazine

10/2021 – 05/2022

- Led the design team in a redesign of the print edition: a new layout system and a consistent visual language that made the content easier to manage.

Event Organiser & Promo Content Designer | cinEScultura Film Festival

2017, 2018

- Designed the festival booklet, advertising and merchandise, and directed and produced the promotional videos.

EDUCATION

UX Design, Frontend Development specialisation | CareerFoundry

2021 – 2022

UX research, interaction design and frontend basics. Built a native mobile app, a web app and a responsive website.

B.A. German–Spanish Studies / European Intercultural Studies

2014 – 2019

Complutense University of Madrid & University of Regensburg. Linguistics, cultural studies and intercultural communication.

Architecture studies, 3 years | Polytechnic University of Madrid

2011 – 2014

Further training at denkwerk: Accessibility in UX & Product Design · Data-Driven Design · AI for UX Designers

SKILLS

Design	Interaction and UI design · prototyping · design systems (atomic, token-based) · UX writing · documentation and developer handover · QA
Research	Usability testing · surveys and stakeholder interviews · benchmarking · journey mapping · data-informed design · accessibility audits (WCAG, BFGS)
AI and code	Prompt design and LLM evaluation · Python for data analysis · HTML and CSS · AI-assisted coding (VS Code, GitHub Copilot, Claude)
Tools	Figma · Storybook · Sketch · Miro · Notion · Google AI Studio · Azure Video Indexer · Adobe Creative Suite
